

OUR HISTORY

“No job is too small”

Our clinical consulting practice with the Eclipsys Sunrise Clinical Manager solution suite resulted from subcontracting assignments under both Eclipsys and other consulting firms as well as independent support for customer sites in a *staff augmentation* capacity. Staff augmentation consists of assisting clients to conduct activities typically required of them during an Eclipsys implementation or post-live support phase.

NOA was formed in 1992 by IT professionals with a desire to provide hospital information system and clinical professionals with an alternative to reliance on consulting firms with only general skills. NOA offers product specific expertise when implementing systems with a clinical or patient care focus. The issues, solutions, opportunities and challenges required by clinical system implementations require specific product experience and applied knowledge in order to deliver real solutions for a customer.

To date, NOA has used our product-specific knowledge to provide services at over 60 hospitals, installing clinical systems using a best demonstrated practices approach that stresses both quality outcomes and knowledge transfer.
